ABOUT ME

Backend Engineer with **3+ years** of experience specializing in Java, Spring Boot, Kafka and high-throughput distributed systems. Expert in event-driven architectures, API versioning, and cloud-native practices. Experienced in **Agile** methodologies, actively participating in **sprint planning, grooming, and retrospectives** to deliver scalable software. AWS Certified Developer.

EXPERIENCE

Software Engineer II

Jan 2026 – Present

JP Morgan Chase

Hyderabad, Telangana

- Created various **custom agents** to automate workflow and **reducing manual efforts by 80%**. Built an **AI agent** to analyze Bitbucket repositories and generate code explanations, automated PR generation and review, end to end testing automated scripts, True CD Components.
- Led design and development** of V3 REST APIs, implementing an anti-corruption layer to decouple legacy V2 services and enable scalable API evolution.
- Architected a version translation layer mapping V3 contracts to V2 backend systems, ensuring backward compatibility and **zero-downtime client migration**.
- Improved API maintainability and reduced client integration complexity by introducing a **contract-first design approach**.

Software Engineer I

July 2023 – Dec 2025

JP Morgan Chase

Hyderabad, Telangana

- Designed and developed production-grade **microservices** using **Java** and **Spring Boot**, handling high-volume financial transactions.
- Built **Kafka**-based event-driven workflows enabling **asynchronous** processing and improved system reliability.
- Designed audit microservice processing **millions of records** daily, **reducing** incident investigation time by **50%**
- Migrated legacy DB2 workloads to CockroachDB, improving system scalability and fault tolerance.
- Developed internal health monitoring tool using Spring Boot and shell scripting to **automate** environment validation checks.

Software Engineer Intern

Jan 2023 – June 2023

JP Morgan Chase

Hyderabad, Telangana

- Designed and implemented a Kafka blue-green deployment orchestration framework preventing dual-active consumer processing during deployments, enabling safe traffic switching and reducing event-processing failures.
- Built a database-driven consumer coordination mechanism using Spring Boot and KafkaListenerEndpointRegistry to dynamically control Kafka listener activation across deployment environments.
- Developed deployment resiliency controls for event-driven microservices supporting controlled failover, rollback, and zero-downtime Kafka consumer transitions.

SKILLS

Programming: Java, SQL, C++

AI / GenAI: LLMs, Prompt Engineering, AI Agents, Spring AI, Retrieval-Augmented Generation (RAG)

Backend: Spring Boot, REST APIs, Microservices, Kafka

Databases: CockroachDB, DB2, MongoDB

Architecture: Distributed Systems, Event-Driven Architecture, API Versioning, Anti-Corruption Layer

Cloud / DevOps: Kubernetes, Docker, CI/CD, Git, Bitbucket

Monitoring/Observability: Splunk, Dynatrace, Grafana

Testing: Junit

Certifications and Achievements: AWS Cloud Practitioner, AWS Developer Associate

EDUCATION

Thapar Institute of Engineering and Technology

Patiala, Punjab

Bachelor of Engineering, Computer Engineering(8.6 CGPA)

Aug. 2019 – June 2023

Divine Public School

Panna, MP

Higher Secondary, PCM (80.6%)

June. 2016 - Apr 2018
